EXAMINER

NGUYEN, LOAN B

ART UNIT	PAPER NUMBER
----------	--------------

2126

DATE MAILED: 08/14/2003

4

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

09/749,609

Applicant(s)

MAZZA, SAM

Examiner

Loan B Nguyen

Art Unit

2126

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 28 December 2000.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-10 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☐ Claim(s) 1-10 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

**Priority under 35 U.S.C. §§ 119 and 120**

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other:

**DETAILED ACTION**

1. Claims 1-10 are presented for examination.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4, 7-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Schofield (5860072) (hereinafter Schofield)

4. As per claim 1, Schofield teaches a method comprising:

obtaining a plurality of attribute specifications, each of said attribute specifications including an attribute name and an attribute type (e.g. col. 1 line 61; col. 2 line 1-12); and generating a permutation of said plurality of attribute specifications (e.g. col. 2 line 13-23; col.3 line 14-21).

5. As per claim 2, Schofield teaches a method generating further comprises:

grouping said plurality of attribute specifications into type groups, each of said type groups containing at least one attribute of same said attribute type (e.g. col. 9 line 43-53);

associating each of said type groups with a corresponding type size (e.g. col. 9 line 30-38); and

sorting said type groups in an descending order based on the value of said corresponding type size (e.g. col. 12 line 38-41).

6. As per claim 3, Schofield teaches a method associating further comprises:

Art Unit: 2126

determining said corresponding type size for a type group (e.g. col. 11 line 14-27); and  
assigning said corresponding type size to said type group (e.g. col. 12 line 65).

7. As per claim 4, Schofield teaches a method determining includes:

obtaining said corresponding type size from a set of pre-defined primitive type  
sizes if the attribute type of said type group is a primitive type (e.g. col. 12 line 65);

extracting a plurality of internal attribute specifications from said type group if  
the attribute type of said type group is a non-primitive type, each of said internal attribute  
specifications including an attribute name and an attribute type (e.g. col. 14 line 33-36); and

generating a permutation of said plurality of internal attribute specifications (e.g. col. 11  
line 14-37); and

computing said corresponding type size of said type group by counting the total number  
of bytes occupied by said permutation of said plurality of internal attribute specifications (e.g.  
col. 12 line 42-45).

8. As per claim 7, Schofield teaches a medium having information recorded thereon, such  
that when said information is read and executed by a computer, the computer is caused to:

obtain a plurality of attribute specifications, each of said attribute specifications including  
an attribute name and an attribute type (e.g. col. 14 line 33-36; col. 15 line 6-9); and

generate a permutation of said plurality of attribute specifications (e.g. col. 11 line 14-  
37).

9. As per claim 8, Schofield teaches that information recorded on said medium further  
causes said computer to:

group said plurality of attribute specifications into type groups, each of said type groups  
containing at least one attribute of same said attribute type (e.g. col. 9 line 43-53);

Art Unit: 2126

associate each of said type groups with a corresponding type size (e.g. col. 9 line 30-38);  
and

sort said type groups in a descending order based on the value of said corresponding type size (e.g. col. 12 line 38-41).

10. As per claim 9, Schofield teaches that information recorded on said medium further causes said computer to:

determine said corresponding type size for a type group (e.g. col. 11 line 14-27); and

assign said corresponding type size to said type group (e.g. col. 12 line 65).

11. As per claim 10, Schofield teaches that information recorded on said medium further causes said computer to:

obtain said corresponding type size from a set of pre-defined primitive type sizes if the attribute type of said type group is a primitive type (e.g. col. 12 line 65);

extract a plurality of internal attribute specifications from said type group if the attribute type of said type group is a non-primitive type, each of said internal attribute specifications including an attribute name and an attribute type (e.g. col. 14 line 33-36); and

generate a permutation of said plurality of internal attribute specifications (e.g. col. 11 line 14-37); and

compute said corresponding type size of said type group by counting the total number of bytes occupied by said permutation of said plurality of internal attribute specifications (e.g. col. 12 line 42-45).

***Claim Rejections - 35 USC § 103***

12. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2126

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

13. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Schofield (5860072) (hereinafter Schofield) in view of Welling et al (hereinafter Welling et al).

14. As per claim 5, Schofield does not specifically show a set of pre-defined primitive type sizes includes the type size definition of C++. Welling teaches the mapping data type between IDL and C++ programming language (Customizing IDL Mapping and ORB Protocols, page 397-398). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Schofield with Welling because it would provide for the mapping process from IDL to C++ programming language or vice versa; also this process is automated in an IDL compiler that generated its interface.

15. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Schofield (5860072) (hereinafter Schofield) in view of Juric et al (hereinafter Juric et al).

16. As per claim 6, Schofield does not specifically show a set of pre-defined primitive type sizes includes the type size definition of Java. Juric teaches the data type mapping between the primitive type in Java programming language and CORBA IDL. (Java2 Distributed Object Middleware Performance Analysis and Optimization, page 31-33). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Schofield with Juric because it would provide for a consistent data type mapping between Java and CORBA IDL and the measurements have been accomplished on identical equipment in an identical environment.

Art Unit: 2126

*Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Fontana et al. (5848273) teaches a method extends C++ programming language binding data a cross networks, and a schema that is provided mapping data type to be used by the IDL defined interfaces.

Schofield (6308255) teaches a method of generating a data structure that contains information about IDL defined interfaces and their related operation for C++ class objects.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Loan B Nguyen whose telephone number is (703)305-0358. The examiner can normally be reached on 8:00AM - 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Follansbee can be reached on (703)305-8498. The fax phone numbers for the organization where this application or proceeding is assigned are (703)306-5404 for regular communications and (703)306-5404 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)305-3900.
